**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Rayburn.

With regard to claim 1, Rayburn (US 3,605,06) discloses an electrical connector comprising:

a dielectric housing (23) comprising opposite first and second mating sections;

and a plurality of circuit modules (21, 21) retained in the housing, each circuit module

comprising

a first circuit board (22) and a second circuit board (22) electrically connecting

to the first circuit board,

the first and the second circuit boards comprising first and second mating edges respectively received in

the first and the second mating sections of the housing for mating with complementary components.

2. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Johnson et al.

With regard to claims 1 -3, Johnson et al (US 5,957,714) disclose an electrical connector comprising:

a dielectric housing (28) comprising opposite first (22) and second mating sections;

and a plurality of circuit modules (21, 21) retained in the housing, each circuit module

comprising

a first circuit board (66) and a second circuit board (66) electrically connecting

to the first circuit board by cable (36),

the first and the second circuit boards comprising first and second mating edges respectively received in

the first and the second mating sections of the housing for mating with complementary components.

Art Unit: 2833

With regard to claims 16, 17, 19, 20 Johnson et al (US 5,957,714) disclose (Fig. 5, 17-19) an extender for electrically connecting two similar connection devices, comprising:

spaced first (22) and second (22) housing portions, arranged opposite each other, respectively defining first and second mating sections thereof,

a plurality of juxtaposed first printed circuit boards (66) with thereof front edge regions disposed in the first mating section',

a plurality of juxtaposed second printed circuit boards (66) with thereof front edge regions disposed in the second mating section; and

a plurality of cables (36) mechanically and electrically connected between rear edge regions of both said first printed boards, respectively.

With regard to claim 18 Johnson et al disclose an intermediate housing portion (28) respectively connected to said first and second housing portions and protectively enclosing said plurality of cables.

***Allowable Subject Matter***

Claims 4-15, are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

No prior art has been found to anticipate or render obvious the presently claimed subject matter.

Specifically, none of the prior art of record discloses the combination of the limitations presented including the structural arrangement of the printed circuit boards in the channels of the mating sections of the housing (claim 4)
